RE: Patient Skin Preparation Product Label Change in Regional Anesthesia Trays

Dear Valued Customer,

Our supplier of patient prep solution products (Aplicare®) has notified us that their product labeling is changing in response to the FDA's industry-wide request to update labels on skin antiseptic products.

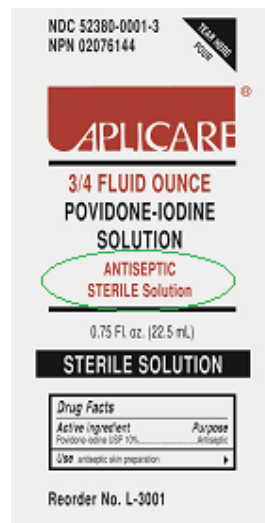

This change will affect all B. Braun Regional Anesthesia Trays that contain any skin antiseptic product from Aplicare. Examples include Epidural, Spinal, and Combined Spinal/Epidural trays. These antiseptic products with updated labeling will be included in Standard and Design Options® Pain Control Trays beginning mid June 2017.

It is important to know that the antiseptic solutions have not changed in any way.

Please contact your B. Braun Sales Representative if you have any questions regarding this change. We value your commitment to B. Braun and thank you for your business.

Sincerely,

Antonia Roth
Sr. Product Manager-Pain Control Marketing
