RE: 20 Ga. x 1-1/4 in. Metal Hub Introducer Needle

Dear Valued Customer,

In an effort to ensure continuous supply of Spinal Anesthesia Trays, we will be changing our primary vendor of the 20 Ga. x 1-1/4 in. introducer needle. The current introducer needle is 20 Ga. x 1-1/4 in. with an overall length of 1.9 in. (including the hub), has a shorter bevel and a metal hub. The new introducer needle is 20 Ga. x 1-3/8 in. with an overall length of 2.1 in. (including the hub), has a longer bevel and a yellow hub.

The transition will impact most B. Braun Standard and Design Options® Spinal Trays containing a 20 Ga. x 1-1/4 in. metal hub introducer needle and will begin over the next few months.

Trays Impacted
